

The Power of Metrics in Population Health Management

MediCompass® Connect

Key Features

- Affordable, real-time condition and wellness monitoring
- Connects with over 50 market-leading devices for asthma, diabetes, cardiac, and wellness programs
- Readily integrates with existing health management investments
- Easy for members, caregivers, and providers to use with simple, one-button upload functionality

MetrikLink®

- Small, portable, universal connectivity hub
- Data transferred directly over a standard phone line or a PC with Internet access
- Securely connects to devices via cable or IrDA link

iMetrikus® is the proven leader in affordable health monitoring solutions designed to effectively share information among healthcare payers, members and care teams. Our award-winning programs include **MediCompass® Connect**, a population health management system that cost-effectively shares real-time and objective biometric data among key stakeholders.

Leveraging your existing health management investments, MediCompass Connect is a modular system and highly customizable to work in concert with them, integrating information that exhibits these six powerful characteristics:

1 Immediate

Rapidly available and not dependent on physician visits or claims flow

2 Objective

Has no recall or member bias in the data entry

3 Meaningful

Clinically relevant to identify opportunities and engage solutions affecting virtually all members

4 Actionable

Ties to specific behavior change initiatives, including treatment compliance, self-management, lifestyle adjustments, etc.

5 Rewardable

Unbiased and traceable to effectively support incentive programs

6 Shareable

Easily accessed and exchanged between members and their health coaches, caregivers, providers and others

MediCompass Connect empowers members with chronic conditions such as asthma, diabetes, weight management and cardiovascular disease to actively participate in self-managing their health in tight collaboration with their care team.

Through our FDA-cleared telehealth gateway, members seamlessly upload biometric data from over 50 personal health monitoring devices, including glucose monitors, blood pressure monitors, spirometers, pedometers, and weight scales. Data is captured from the devices and transferred securely to the MediCompass database, then to your primary application using HL7 messaging. This provides an effective, easy-to-use solution for real-time management of chronic conditions and wellness programs.

Members can choose from a variety of convenient upload methods, including personal computers, mobile phones¹ via Bluetooth®, or simply over standard phone lines through our one-button **MetrikLink® Connection Hub**.

Turn Insight into Action with MediCompass Connect

Benefits for Population Health Management Programs

- Ensure constant contact with your highest cost members
- Improve outcomes and lower claims costs
- Support for over 50 third-party biometric devices
- Curbs medication and treatment non-compliance
- Leverage existing, health management and HIT investments
- Capture and map key disease specific biometric data points
- Obtain measurable data across large member populations

Even More Powerful with Additional MediCompass Functionality

MediCompass Connect also works in conjunction with optional features from the MediCompass application platform. Members can access a broad library of online reports and tracking features and have the same easy-to-read visual presentation of their current health status as their care team. This helps to avoid unnecessary office and emergency room visits, as well as reduce workplace absenteeism. Additional features can be leveraged by members and the care team for secure messaging, prescription refills, and appointment scheduling. All can be made available through your existing Web-based applications.

Benefits of Biometric-Driven Chronic Care Monitoring

Discover how you can leverage your disease and case management systems by extending and enhancing them with objective telehealth data. The traditional problem with collecting biometric information from condition monitoring devices has been the sheer number of devices in the marketplace. Each requires its own connectivity solution to capture and integrate meaningful data, which drives up per member costs and limits wide-spread program enrollment.

With MediCompass Connect, members can link to over 50 personal health monitoring devices. They can then upload data directly to the MediCompass database that, in turn, integrates with your personal health record system.

Members, along with their care team, benefit from the power of real-time, actionable information. The combined effect creates a partnership that means better care management and improved health status across your targeted populations.

Members enrolled in health management programs receive a kit that contains all the tools to upload personal health data from their home monitoring or diagnostic devices.
