

GET CONNECTED!

MediCompass® Connect delivers objective biometric data to your existing EMR

You've got your EMR up and running, but...

- ▶ You're finding it difficult to measure your progress
- ▶ User adoption and persistence aren't what you hoped they would be
- ▶ You want to deliver measurable results to your stakeholders

Remote monitoring solutions are essential to the success of any EMR. But without the right solution, the clinical and economic benefits of the EMR are easily lost.

Introducing MediCompass Connect

A modular suite of telehealth tools that puts actionable biometric data directly in the hands of care teams.

Cost-effectively enables:

- Connectivity to the largest device interface library in the market
- Visibility to an individual's evolving health status
- Consumer feedback that promotes meaningful care engagement

Our solution readily interfaces with your EMR, so implementation is easier and more cost-effective than ever. MediCompass Connect seamlessly uploads biometric data from **self-monitoring devices** including:

Blood glucose meters

Blood pressure monitors

Spirometers

Pedometers

Weight scales

Pulse oximeters**

PT/INR monitors**

What makes MediCompass Connect special?

MediCompass Connect enables consumers to upload self-testing data via PC or telephone with our one-button **MetrikLink® Connection Hub**. Most popular personal health monitoring devices are interfaced using HL7 messaging.

**Caution: When connected to a prescription monitoring device, Federal law restricts this device to sale by or on the order of a physician.

HEALTHIER POPULATIONS THROUGH ACTIVE BIOMETRICS

MediCompass Connect is the leading low-cost telehealth solution that provides access to active, continuous biometric data. It is the missing link to objective consumer data and behavior measurement – an essential part of any successful health management program.

This customizable connectivity solution enables meaningful and timely collaboration between individuals and their care team. MediCompass Connect may help increase consumer engagement and retention, support treatment and medication compliance, enrich care provision, improve health status and reduce program costs.

MediCompass Connect is an FDA-cleared telehealth gateway that...

- Ensures more consistent contact with highest cost individuals.
- Contains a feedback mechanism to encourage user compliance.
- Supports the largest library of third-party biometric devices in the industry.
- Leverages existing health management and HIT investments.
- Obtains measurable data across all populations.
